Broward Powered by AI Website: Data and Student Privacy Passages

Excerpted verbatim from *Broward Powered by AI (Broward County Public Schools, browardschools.ai, web page content as captured Sept. 2026)*. The source has no page numbers; locations are given by section. This is a web page (a multi-section district hub site), so no page numbers are given; each passage is labelled with the site section it comes from. Ellipses (…) mark omitted text. Repeated material (the same data-privacy and no-model-training statements recur in several sections) is quoted once or in the most complete form.

Landing Page Introduction (excerpt)

Source: web page, header / landing section

See how BCPS uses AI responsibly across teaching, learning, and operations: real governance, clear transparency, human oversight at every step, and strong protections for student data, all backed by public evidence you can check.

Recent Updates: Board Action on AI Policy (excerpt)

Source: web page, section 'What's new'

The School Board adopted the District's Artificial Intelligence Policy on September 15, with guardrails for student and staff data, teacher control of classroom AI use, and real-time safety monitoring on every student-facing tool.

Approved Tools: Only Reviewed, District-Approved Tools

Source: web page, section 'Approved tools'

Broward uses an approved-tools-only model. Student and staff information is never entered into tools that have not been reviewed. Each approved tool clears privacy, security, and accessibility review first.

Microsoft Copilot (tool card)

- An AI assistant inside the district's protected Microsoft environment, with enterprise data protection enabled.
- Enterprise data protection enabled
- Not used to train public AI models on school data

MagicSchool AI (tool card)

- Student data is never used to train AI models, and the district owns all of it

How a tool gets approved

Every tool passes the same review before it reaches a classroom.

- **Privacy review** Signed data privacy agreement, FERPA check, and an independent privacy rating.
- **Security review** Independent security audit, encryption, and breach-notification terms.

Student-facing tools are also stress-tested before students use them. The District's testing rubric scores how a tool refuses unsafe requests, redirects students to safe alternatives, keeps a conversation from being steered off course, protects privacy, and flags concerns for adult review.

Family Guide & FAQ: Our Commitment and What We Know Today (excerpt)

Source: web page, section 'Family Guide & Frequently Asked Questions'

Student privacy, safety, transparency, and accountability remain district priorities.

Our goal is to prepare students for the future while protecting safety, privacy, human relationships, and meaningful learning experiences.

Student privacy, safety, transparency, and accountability are district priorities.

Approved district tools are different from open public tools such as ChatGPT or Google Artificial Intelligence features. Open public tools are not approved by the district for student-facing instructional use.

Based on current district requirements and practices, student information entered into approved tools must remain within the Broward County Public Schools environment; student information is not used to train district-approved Artificial Intelligence models.

Approved Tool Snapshot: Open Public Tools (excerpt)

Source: web page, FAQ section, 'Approved tool snapshot' table row

The district is reviewing controls for access to open public tools on school-issued devices, including devices used on non-school networks.

Frequently Asked Questions: Privacy, Data, and Monitoring (excerpts)

Source: web page, FAQ section, questions 9, 18-23, 29, 32, 43, 48-50, 54, 60-63, 71, 74

9. How are teachers trained?

… Specific to Artificial Intelligence, current and planned training includes responsible use, ethics, privacy, instructional best practices, human oversight, and guidance on when Artificial Intelligence should and should not be used.

18. How are Artificial Intelligence tools selected and approved?

District-approved tools are reviewed for instructional value, privacy, safety, accessibility, age appropriateness, teacher training needs, responsible use, and alignment with district goals.

19. What are real-time threat detection and real-time moderation?

Real-time threat detection means a tool can alert adults quickly if a student interaction includes serious concerns such as self-harm or threats to others. Real-time moderation means the tool

redirects or stops conversations that move into unsafe, inappropriate, or overly personal areas.

20. Who receives student safety alerts?

For approved student-facing tools, teachers receive alerts when a serious threat is detected. Depending on the level of concern, the alert may also be escalated to administrators and other trained personnel.

21. How is student information protected?

The district reviews approved tools for privacy and security requirements. Relevant protections include the Family Educational Rights and Privacy Act (FERPA), the Children's Online Privacy Protection Act (COPPA), and the Protection of Pupil Rights Amendment (PPRA). Florida protects K-12 student data through the Student Online Personal Information Protection Act (Florida SOPIPA), State Board of Education Rule 6A-1.09550, and the Florida Information Protection Act (FIPA). Student information in approved tools stays within the Broward County Public Schools environment and is not used to train Artificial Intelligence.

22. Do student interactions train the Artificial Intelligence models?

No. Under current district requirements, approved Broward County Public Schools tools must not use our students' interactions to train Artificial Intelligence models.

23. Are ChatGPT, Google AI, or other open tools used?

Open public tools such as ChatGPT and Google Artificial Intelligence features are not approved by Broward County Public Schools as student-facing instructional tools. They may still be accessible outside district-controlled settings. The district is reviewing controls for open public tools on school-issued devices, including devices used on home networks. Access may be more difficult to control when students use devices on home networks. Families are encouraged to remind students to use only teacher-directed, district-approved tools for schoolwork and to discuss safe, responsible technology use at home.

29. Will students be taught about the risks and limits of Artificial Intelligence?

… This includes checking accuracy, avoiding overreliance, protecting privacy, using tools ethically, and verifying generated information.

32. What would cause the district to stop using a tool?

… If evidence and data show that a tool does not support district goals, improve learning, protect students, or meet safety and privacy requirements, the district reconsiders, adjusts, replaces, suspends, or discontinues its use.

43. Are teachers being trained to use Artificial Intelligence responsibly and effectively?

Yes. The district is providing professional learning focused on responsible use, privacy, safety, instructional quality, and human oversight. …

48. Do students use their own district login when accessing approved Artificial Intelligence tools?

Approved tools are made available through the student access portal, known as Clever. Students can access only the tools available for their grade level and instructional setting. Some features

must also be assigned or enabled by a teacher.

49. Is a student's work in MagicStudent private?

MagicStudent is not currently available to Broward County Public Schools students. Information entered into approved tools stays within the district environment and is not used to train Artificial Intelligence models. Approved tools allow authorized teachers or administrators to review student activity for instruction, safety, and appropriate use.

50. Are students' Individualized Education Programs (IEP) entered into MagicSchool?

At this time, details from a student's Individualized Education Program are not automatically loaded into MagicSchool. The district currently has this feature turned off. The district team is reviewing features and processes to ensure that, if activated, the feature will align with district and state standards and follow Broward County Public Schools privacy requirements.

54. How will the district respond if state law requires parent permission before students use Artificial Intelligence?

The district will follow any final legal and policy requirements. The Broward Powered by AI site is intended to provide parent notices, available choices, contacts, and updates. Because requirements may change, families will receive clear information before any student-facing Artificial Intelligence tool is introduced. …

60. Do approved Artificial Intelligence tools allow adults to review what students enter, and who can see it?

Approved student-facing tools include monitoring, moderation, and flagging features. Teachers oversee student use, and safety concerns are shared with appropriate school administrators. The exact level of visibility depends on the tool and the educational or safety purpose. Student information is protected, remains within the district environment, and is shared only with authorized staff who need it.

61. Can parents review their child's prompts and work in approved Artificial Intelligence tools?

As with other student work, parents may ask the teacher or school to explain how a tool is being used and may ask questions about their child's work.

62. Will parents need to give permission before schools use Artificial Intelligence with their child?

The district will follow final state law, School Board policy, and district procedures. Current family resources are designed to provide notice, available choices, contacts, and updates. Because requirements may change, families will receive clear information before a student-facing tool is introduced. …

63. Who trains the Artificial Intelligence systems used by Broward County Public Schools?

Artificial Intelligence models are developed and trained by vendors using large data sets before the district approves them. Broward County Public Schools reviews tools for privacy, safety, accessibility, reliability, and instructional value. District-approved tools do not use Broward County Public Schools students or their data to train Artificial Intelligence models.

71. Will students learn how Artificial Intelligence works, including generative Artificial Intelligence and Artificial Intelligence agents, rather than only learning how to use it as a productivity tool?

… Through age-appropriate activities, students learn about patterns, data, predictions, checking information, privacy, fairness, and how technology can help solve problems. …

74. How does Broward County Public Schools help ensure that Artificial Intelligence image-generation tools are safe for students?

… As with all district-approved Artificial Intelligence tools, human oversight, transparency, privacy, and age-appropriate use remain essential expectations.

Myths vs. Facts (excerpt)

Source: web page, FAQ section, 'Myths vs. facts'

Myth: Student data is used to train district-approved Artificial Intelligence tools.

Under current district requirements, student information in approved tools must remain within the Broward County Public Schools environment and cannot be used to train Artificial Intelligence models.

Myth: The district is relying only on vendors to decide whether tools are safe.

The district reviews student-facing tools for instructional value, privacy, safety, and other requirements, and performs its own rigorous vetting process, including adversarial prompting, real-time threat detection, and real-time moderation for student-facing tools.

School Board Resolution No. 26-132 (excerpt)

Source: web page, Resolution text (March 10, 2026)

WHEREAS, SBBC is committed to leveraging AI to personalize instruction, streamline educational practices, and prepare students for the demands of a technology-driven world, while safeguarding privacy, closing the digital divide, promoting digital citizenship, and expanding opportunities for critical thinking and innovation; and

WHEREAS, SBBC is committed to ensuring that AI technologies are implemented with appropriate human oversight and in accordance with ethical guidelines to safeguard against plagiarism, bias, and misuse of AI in academic work, and to protect students' and educators' data privacy; and

Parent Resources: How Student Data Is Protected

Source: web page, section 'Parent Resources'

The protections behind every AI decision. Read the plain-language answer first, then open the full document. The School Board of Broward County adopted the District's Artificial Intelligence Policy, Policy 7540.08, at its September 15, 2026 meeting.

… It ensures AI is used responsibly and ethically, with guardrails in place to protect student and staff data, and includes provisions to ensure teachers control how AI is used in their classrooms and that parents are informed and given agency in how their children learn and use AI. Of particular note is the guarantee that all student-facing generative AI tools need to provide real-time threat detection, escalation, and moderation, …

Sample answers for layout. Final wording to be confirmed by BCPS legal and data governance, including any Florida-specific privacy law.

What information is collected, and why?

Approved tools collect only what is needed to deliver the educational service. Information is used for that purpose alone, not for advertising or any unrelated commercial use.

Where is data stored, and who has access?

Data stays within the district's protected systems and approved vendor environments governed by data privacy agreements. Access is limited by role to the staff who need it for instruction and support.

Can AI train on my child's information?

No. Approved tools are configured so student and staff information is not used to train public AI models. This is a condition of approval for every tool listed on this site.

What are my rights as a parent?

Parents have the right to know what AI tools are being used in their child's education and how they are being used, and to request that their child be excluded from the use of AI where practicable. Under FERPA you may also inspect and review your child's education records and request corrections; under PPRA, certain surveys require notice and the chance to opt out.

How are tools checked before students use them?

All student-facing tools are subjected to a rigorous review process to ensure they include protections beyond the already stringent BCPS data privacy and security provisions. Each tool must

demonstrate real-time threat detection and moderation, with immediate notification to teachers and administrators of any inappropriate usage. Vendors also sign data privacy agreements and must meet COPPA requirements for younger students; approved tools may not sell student data or use it for targeted advertising.

The laws that protect your child

- **FERPA** Federal law giving parents rights over education records and control of personal information.
- **COPPA** Federal rule protecting the online data of children under 13. Vendors must comply.
- **PPRA** Requires notice and opt-out for certain surveys on sensitive topics.
- **State privacy law** Limits how education vendors use student data, including a ban on selling it.

Your choices

Questions and opt-out

Families can ask how AI is used in their child's classroom and learn about available choices.

Family Forum #1: What the Forum Covered (excerpt)

Source: web page, Community Engagement, 'Family Forum #1 — July 29, 2026'

Before an AI tool can be used with students, it must pass extensive privacy, security, moderation, and safety reviews. District leaders shared that approved tools such as MagicSchool and MagicStudent have monitoring features, real-time safeguards, and meet student-privacy compliance requirements.

Family Forum #2: Safety and Digital Citizenship (excerpt)

Source: web page, Community Engagement, 'Family Forum #2 — August 27, 2026'

Students learn to protect personal information, ask an adult before using unfamiliar technology, communicate respectfully, and check information before sharing it. Families can reinforce these habits through simple conversations at home.

SPARK Initiative (excerpt)

Source: web page, Recent Updates, 'Broward selected for Impact Florida's SPARK cadre'

Through the program, district teams work on both policy governance and practice: developing or refining guidance on ethics, data privacy, procurement, academic integrity, and responsible use, …

MagicSchool & MagicStudent Readiness, Safeguards, and Implementation (excerpt)

Source: web page, section 'Accountability'

The Division of Academics' response to School Board Agenda Item 1 concerns about MagicSchool AI, MagicStudent, student safety, data privacy, teacher control, parent transparency, training, and accountability.

The evidence shows Broward County Public Schools has already established the core privacy, contractual, training, and oversight structures needed to proceed responsibly. …

Flagging is a separate, back-end administrative notification layer, with sensitivity configurable by the District. …
