Cambridge Public Schools GenAI Guidance: Data and Student Privacy Passages

Excerpted verbatim from *Generative AI (GenAI) Guidance (Cambridge Public Schools, Educational Technology Department web page)*. The source has no page numbers; locations are given by section. Ellipses (…) mark omitted text. The source is a web page without page numbers; link text (e.g., the CPS list of approved tools) is not reproduced as links.

Introduction (excerpt)

Source: web page, introduction

By establishing guidelines for data security, privacy, and proper citation, and by encouraging critical thinking around AI, we can create learning environments where GenAI supports—not supplants—the creative and intellectual work of students and educators.

Data Security, Approval, Equity & Access

Student Data Privacy: Safeguarding CPS students' personal information is a top priority. Generative AI collects data to inform its algorithms, so its use should be intentional and mindful of privacy.

Adherence to Guidelines: Follow the guidelines of the Student Data Privacy Consortium (SDPC) to ensure tools used comply with student data privacy agreements. Please refer to this CPS list of approved tools.

Approved vs. Not Approved Tools: CPS-approved Generative AI tools include SchoolAI for all students, Canva and MagicSchool for students 13 and older, and Gemini for CRLS students. Tools like ChatGPT and Microsoft Copilot are not approved for student use.

Confidential Data: Do not input student or staff personally identifiable information (ex. name, email, ID, etc.) into open or public Gen AI models, even if using paid subscriptions like ChatGPT Plus or MagicSchool.
