If writing in class, educators can circulate the room or use monitoring software to observe the writing process.

What Should Be Considered When Creating Policy for AI Use? (excerpt)

Source: page 22 [graphic]

[graphic] While AI can empower educators and students and improve productivity, concerns about privacy, security, plagiarism, and cheating have caused school districts nationwide to prohibit the use of some AI tools. However, AI works in the background of many technology tools and students can make use of these tools outside of the school setting. This unregulated access makes the banning of AI tools impractical and does not provide a solution to security and appropriate use concerns.

[graphic] Evaluate tools

[graphic] Carefully examine AI tools to determine if they are appropriate for education use, including the technical (privacy and security), functional, and instructional features. Remember that educators and students may use AI tools differently.

[graphic] Adhere to security guidelines

[graphic] Know how student data privacy policies impact the use of AI tools. Carefully examine the privacy policies of AI tools to ensure compliance with FERPA and COPPA.

[graphic] Monitor use

[graphic] Assist educators in monitoring student use of AI tools through classroom observation or monitoring software. Provide training so educators understand the students' experience when using the tools.

Training on the Use of AI: Expand Digital Citizenship Instruction (excerpt)

Source: page 24

Digital citizenship topics should be expanded to support AI tools, including how AI affects cyberbullying, academic integrity, information literacy, security, copyright, licensing, and fair use.
