North Dakota K-12 AI Guidance Framework: Data and Student Privacy Passages

Excerpted verbatim from *North Dakota K-12 AI Guidance Framework (North Dakota Department of Public Instruction, web page)*. The source has no page numbers; locations are given by section. This is a web page with tabbed sections, so there are no page numbers. Ellipses (…) mark omitted text. Only a small amount of the page text touches on privacy.

Introduction (excerpt)

Source: web page, introduction

AI cannot exist on its own. It requires human input (in the form of data, questions or prompts, and preprogrammed algorithms or mathematical instructions). This technology can process large volumes of data with incredible speed, efficiency, and precision to produce an output.

Glossary: Large Language Model (excerpt)

Sometimes, companies include data sets of text without the creator's consent.

Implementation Roadmap: Evaluate Technology Infrastructure

Source: web page, roadmap

Review current EdTech providers supplying AI to vet their safety, privacy, reliability, and efficacy to determine if they are appropriate for your school and which users they will support based on their terms of service

Age-Appropriate Use: Middle School (excerpt)

Source: web page, developmental stages

You should also note any age-level restrictions on some AI products. Some tools are prohibited for children under age 13 or require parental/guardian permission.

Special Education: Data Collection and Analysis (excerpt)

Source: web page, special education

AI can also assist in data collection and analysis, helping educators understand student performance and devise effective teaching strategies. AI-powered predictive analytics can help educators to identify potential learning obstacles and provide timely intervention. By analyzing data on student performance and behavior, AI can predict which students might be at risk of falling behind and suggest strategies to help them catch up.
