Orange County Public Schools AI Guidance Hub: Data and Student Privacy Passages

Excerpted verbatim from *Artificial Intelligence - District Guidance Hub (Orange County Public Schools, Florida)*. The source has no page numbers; locations are given by section. This is a web page (an interactive hub), so there are no page numbers. Ellipses (…) mark omitted text. Short labels such as "What this means:" are omitted.

Hub Overview: Families and Safety (excerpt)

Parent guides, approved tools, and student-data protections

How we protect our network and students, plus policy and request review

Parents and Families: Consumer AI vs. Student Workspace

Source: web page, section 'Parents and Families'

Your child's school uses protected educational systems that differ from consumer AI applications families may use at home.

Consumer AI tools may use data to train models or serve ads. Approved OCPS systems are reviewed for privacy, data use, and student protections.

Approved AI Software

Source: web page, section 'Approved AI Software'

Use the approved lists before adopting an AI tool.

These lists identify AI tools that have moved through district review for instructional fit, privacy, data use, and implementation needs.

Safety, Privacy, and Approval Pathways

Source: web page, section 'Safety'

AI work in OCPS is anchored in human review, student-data protection, monitoring, and a formal review pathway for digital tools.

Every AI tool a student uses sits behind layers of district protection. Choose a view, then click through each step to see how OCPS protects its network and protects students as they learn with AI.

Protecting our network: five layers of network protection

Every tool is reviewed first — Before an AI tool reaches a classroom, district teams review its contract, student-data privacy, cybersecurity, and educational value.

Only tools that meet district standards are allowed. Tools that don't pass are blocked or redirected.

District-managed accounts — Students and staff sign in with their OCPS accounts, so AI access runs through district settings and safeguards instead of personal consumer accounts.

School AI use happens inside a protected educational workspace, not the open consumer version of a tool.

Content filtering — District filtering screens web traffic on the district network, blocking inappropriate content and AI tools that have not been approved.

Monitoring for safety — Activity on district resources may be monitored for compliance and safety, helping staff notice and respond to concerns.

There is no expectation of privacy on district systems. That visibility is what lets adults step in when something looks wrong.

Student data stays protected — Approved enterprise AI tools do not use OCPS data to train public AI models, and sensitive information may only be entered into tools approved for that type of data.

At the center of every layer is your student and their information.

Protecting students using AI: five steps of student protection

Age-appropriate AI experiences — Student tools, such as the Gemini youth experience, add safeguards and age-aware responses designed for learners under 18.

Personal information stays private — Students learn not to share personal or confidential information with AI, and approved tools are vetted for how they handle student data.

Privacy is protected by both the tool and the student's own habits.

Adults stay in the loop — Teachers review student work and AI outputs, and important decisions about students are always made by people, never by AI.

Guardrails: Data Protection, Enterprise Tools, Monitoring

Source: web page, Safety section (guardrail cards)

Data Protection — Confidential data, sensitive student records, and PII may only be entered into tools approved for that data classification.

Enterprise Tools — Staff use District-vetted, secure AI systems that do not use OCPS data to train public models.

Monitoring — Users do not have an expectation of privacy on District resources. AI activity may be monitored for compliance and safety.

Professional Learning — The District makes professional learning focused on AI literacy, data privacy, and ethical integration available to staff.

AI safety and security — Tools are evaluated for contracts, data privacy, cybersecurity, system compatibility, educational value, filtering, and monitoring needs.

- Contractual protection
- Student-data privacy
- Filtering and monitoring

Software and AI Request Process (excerpt)

Source: web page, Safety section (eight review steps)

IT and governance review — Cybersecurity, compatibility, and data privacy are evaluated.

Legal review — Terms are checked for FERPA, data use, public records, and intellectual property concerns.

Decision — Approved tools are added to the list; denied tools are blocked or redirected.

Taxonomy of Scaffolded AI Tools (excerpt)

Source: web page, Safety section

Pattern detection, student risk flagging, enrollment forecasting, and operational dashboards.

Gemini Youth Experience

Source: web page, section 'Student experience'

The Gemini Youth Experience is designed for students under 18 with added safeguards, age-aware responses, and privacy protections that differ from consumer AI access.

Protected environment — Student use is connected to educational accounts and district-managed controls rather than general consumer access.

Google Search AI Mode

Source: web page, section 'Search'

Privacy, monitoring, safe search, and technical limits.

Search has evolved. Google Search AI Mode is different from District-approved instructional AI platforms, so students and staff need clear expectations for privacy, monitoring, and verification.

Consumer vs. student experience — Consumer AI experiences may use data differently. OCPS-managed student accounts and approved tools are reviewed for student privacy and district safeguards.

Foundations: What is AI? (excerpt)

Source: web page, section 'Foundations'

The value of AI depends on the instructional, privacy, and governance systems around it.

Stakeholder Feedback Summary (excerpt)

Source: web page, section 'Stakeholder Summary'

Districts need approval pathways, privacy review, classroom-use guidance, audit routines, staff training, and model checks that evolve as tools change.

Teachers and Staff (excerpt)

Source: web page, section 'Teachers and Staff'

AI may support staff workflow, but educators remain responsible for verification, professional judgment, instructional quality, data privacy, and fairness.

AI Literacy (excerpt)

Source: web page, section 'AI literacy'

Recognize AI, protect privacy, question outputs, and use tools only when authorized.

Set governance, review data practices, and align tools to district goals.

Understand the difference between consumer AI and protected educational systems.

Using AI Wisely for Students: the PAUSE Check (excerpt)

Source: web page, section 'Students'

Students may use AI only when authorized by the instructor and must verify, disclose, and protect private information.

S — Safe? Have I protected confidential data and personal information?
