Plano ISD Generative AI in Education Web Page: Data and Student Privacy Passages

Excerpted verbatim from *Generative AI in Education (Plano Independent School District, Texas, web page)*. The source has no page numbers; locations are given by section. Source is a district web page (FAQ-style). Ellipses (…) mark omitted text. FAQ answers are matched to questions by content and order.

Introduction (excerpt)

Source: web page, introduction

Our guidance provides clear policies, approved tools, and practical strategies to ensure AI enhances education while maintaining academic integrity and protecting student privacy.

What is the District's process for approving AI tools and other online resources?

Source: web page, FAQ

A final determination will be made after all factors have been considered (i.e. terms and conditions, data privacy agreement, existing tools, academic fit, cost, redundancy, interoperability, etc.).

What kinds of data should I avoid sharing with AI tools?

Source: web page, FAQ

You should be very careful not to share sensitive records with any AI system. Sensitive records may include but are not limited to the following: Personally Identifiable Information,, sometime referred to as PII (ex: name, address, birth date, etc), educational records (ex: IEPs, 504s, etc), student photos, health records, usernames, passwords and proprietary information.

What guardrails are in place to make sure student and teacher information is safe and not made public?

Source: web page, FAQ

Even though they may appear similar on the surface, the AI tools used in Plano ISD are substantially different when compared to consumer (public) tools. This is especially true with regard to privacy and data governance. The tools we offer have been designed to comply with privacy standards, acting as a "school official" under FERPA.

Information entered into, uploaded to, or generated by approved tools through a District-provided account is not used to train or improve AI models. It stays within Plano ISD’s digital perimeter. Chats and content generated by our approved tools are not reviewed by humans outside of our organization or, potentially, by the tool providers upon our explicit request. Prompts and responses stay within our organization's security boundary. Student data is never used for advertising purposes. These guardrails, coupled with AI Literacy basics, help keep your child's information safe.

How does Plano ISD support responsible, open and future-ready use of AI tools (excerpt)

Source: web page, FAQ

The district's approach emphasizes academic integrity, critical thinking, cybersecurity and data privacy.

Restrictions apply only where required by law (e.g., tools that prohibit users under age 13) or by vendor terms of service. …

Google's system-level safeguards may also limit access to some third-party tools on district-issued accounts, a security enhancement implemented statewide for users under age 18.
