South Carolina AI Standards Framework: Data and Student Privacy Passages

Excerpted verbatim from *South Carolina Artificial Intelligence (AI) Standards Framework (South Carolina Department of Education; copy hosted in the state-ai-policy-field-guide repository)*. Page numbers match the document's own page numbering. This is a 15-page computing/AI course standards framework for students (not a district use policy), so its privacy content appears as student learning standards. Text marked [graphic] was transcribed from table cells whose text-layer extraction interleaves columns; it was checked against the PDF's table structure. Ellipses (…) mark omitted text.

Process Standards (excerpt)

Source: page 1

6. Design solutions for privacy, protect against bias and defend against cyber influences.

Theme Standards: Data and Analytics, and Security and Privacy (excerpt)

Source: page 2 [graphic]

[graphic] Data and Analytics: 3. Students will evaluate various data collection methods, data storage tools, data analysis tools, data representation tools.

[graphic] Security and Privacy: 11. Students will research security and privacy protocols associated with AI and ML solutions and apply the protocols to protect the data throughout the processes.

Standard 3, Data and Analytics (excerpt)

Source: page 6 (table row) [graphic]

- [graphic] Level 3: Select methods of data organization and storage (e.g. local, portable or cloud storage), considering factors such as cost, speed, reliability, accessibility, privacy and integrity.

Standard 9, Impacts of Computing (excerpt)

Source: page 13 (table rows) [graphic]

- [graphic] Level 2: Define and illustrate examples of big data (e.g., information collected from social media or smartphone use), highlighting data privacy implications.
- [graphic] Level 3: Compare and contrast the benefits of using big data and the known security and privacy challenges.
- [graphic] Level 4: Identify the ethical and privacy implications encountered in the curation, management, and monetization of data (e.g., harvesting, information overload, knowledge management repositories, sharing, summarizing).

Standard 10, Impacts of Computing (excerpt)

Source: page 14 (table row) [graphic]

- [graphic] Level 3: Justify intended and unintended outcomes of computing and AI solutions (e.g., internal, and external activities including social media/online search use, purchase/use history, geolocation).

Standard 11, Security and Privacy

Source: page 15 (table rows) [graphic]

[graphic] Students will research security and privacy protocols associated with AI and ML solutions and apply the protocols to protect the data throughout the processes.

Row 1

- [graphic] Level 1: Identify AI and ethics-related laws and analyze their effect on digital privacy, security, intellectual property, network access, contracts, and harassment.
- [graphic] Level 2: Discuss security and privacy issues that relate to AI applications.
- [graphic] Level 3: Research the security vulnerabilities of machine learning models and ways to mitigate them.
- [graphic] Level 4: Research and evaluate the security issues relevant to machine learning model creation, storage, and usage.

Row 2

- [graphic] Level 1: Explain the ethical methods of collecting data from human subjects while protecting privacy and security for use in training machine learning models.
- [graphic] Level 2: Evaluate the issues related to privacy and security in the development and use of AI and ML models.
- [graphic] Level 3: Evaluate methods of direct and indirect AI interaction, such as using AI-enabled systems, contributing data to a dataset, and trading privacy and security for access to an AI tool.
- [graphic] Level 4: Apply data protection protocols within AI and ML solutions, addressing concerns throughout the data cycle-collection, storage and use of iterative processing algorithms.
- [graphic] Level 2 (second item in cell): Research the ethical, security, and privacy issues that affect data gathering, storage and overall data quality that can contribute to bias in a model.
