Stillwater Public Schools AI Tools Page: Data and Student Privacy Passages

Excerpted verbatim from *AI Tools (Stillwater Public Schools, Oklahoma), web page*. The source has no page numbers; locations are given by section. This is a web page (marked 'OLD PAGE' in its heading), so there are no page numbers. Ellipses (…) mark omitted text.

Introduction (excerpt)

Source: web page, introduction

These secure, district-approved tools are part of our Google Workspace for Education accounts and are designed to support innovation and learning.

Our Commitment to Safety and Integrity (excerpt)

Source: web page, section 'Our Commitment to Safety and Integrity'

Your child's safety is our top priority. Both Gemini and NotebookLM are classified as Google Core Services. This means student data, chats, and files are never shared outside our district or used to train AI models.

General Questions & District Vision: Approved Tools (excerpt)

Which AI tools, if any, have been approved for use by the district?

Google's Gemini and NotebookLM are approved as Core Services within our Google Workspace for Education accounts for all staff and for students in grades 6-12. Generative AI elements within other district-approved curriculum tools such as Adobe, Canvas, and Google Classroom are also approved as part of the comprehensive evaluation each tool undergoes before approval. Other tools must be evaluated and approved by the district before use.

Data Privacy & Security

Source: web page, section 'Data Privacy & Security'

How is our district protecting student data when AI tools are used?

We only approve AI tools that meet our standards for data privacy. Our approved tools (Gemini, NotebookLM) are "Core Services" in our Google Workspace, meaning they follow the same strict privacy rules as Google Drive and Gmail.

Do the AI tools used by the district comply with federal and state privacy laws like FERPA (Family Educational Rights and Privacy Act) and COPPA (Children's Online Privacy Protection Act)?

Yes. Our district policy (EFEAA) requires all AI tools to comply with data privacy laws. The Google Workspace for Education Core Services we use are governed by a robust privacy policy that affirms their compliance with laws like FERPA and COPPA.

What student information (Personally Identifiable Information or PII) is being collected by these AI tools, and why?

Google's Core Services for Education, which include Gemini and NotebookLM, do not collect PII for commercial purposes. Like other Google Workspace apps, they process data to provide the service (e.g., to process a prompt and return an answer) but this data is not used for advertising or other commercial intentions.

Who owns the data that students input into AI platforms?

For our district's approved Google Core Services, Google's policy states that “Schools, not Google, own their student and faculty data.”

Is student data being used to train AI models?

No. For our approved Google Workspace Core Services (Gemini and NotebookLM), student chats, prompts, and uploaded files are never used to train AI models and are never shared outside the district.

What security measures are in place to prevent data breaches related to AI tools?

Our approved AI tools are part of the Google Workspace for Education, which is built with strong, multi-layered security features, including data encryption and multi-factor authentication, to protect data from threats.

Support for Teachers & Staff (excerpt)

Source: web page, section 'Support for Teachers & Staff'

What guidelines are teachers following for using AI to communicate with parents or assess student work?

Staff must use district-approved tools, supervise student use, and never upload confidential or sensitive student information (like grades or PII) into an AI tool. They must also carefully evaluate any AI-generated content for accuracy and appropriateness before using it.

Broader Impacts & Future Planning: Reviewing and Approving New AI Tools (excerpt)

Source: web page, section 'Broader Impacts & Future Planning'

How does the district review and approve new AI tools for classroom use?

Approved tools are determined by district personnel after a review of their security, privacy, data usage, and academic integrity standards. Staff are not permitted to use or have students sign up for unapproved AI platforms.
