Educators may:

- Utilize AI tools to support instructional planning, differentiation, communication, and accessibility for students with disabilities, provided the tool is approved through the District Digital Learning Tools process and so long as personally identifiable information (PII) or sensitive student data is not input into AI application, unless approved for such use

Operations: Operational Efficiency and Workflow Automation (excerpt)

Source: page 5

Any AI implementation must be approved through the District Digital Learning Tools process and evaluated for security and data privacy compliance prior to deployment and regularly monitored for efficacy and reliability.

All District employees who choose to utilize AI applications are prohibited from inserting confidential information, such as student personally identifiable information, into AI applications unless approved for such use through District Digital Learning Tools process.

Operations: Staff Support and Professional Development (excerpt)

Source: page 6

AI tools supporting professional development (e.g., personalized learning platforms for staff training) must be selected based on their capacity to provide actionable insights, promote skill growth, and respect user privacy. AI must be used to enhance learning opportunities without infringing on employee privacy or misrepresenting their capabilities.

Operations: Student Support Services and Intervention (excerpt)

Source: page 6

AI may act in the capacity of an early warning system, assisting in identifying trends in student behavior, performance, and engagement across the district to support data-driven interventions.

However, any AI application in this context must operate under strict confidentiality agreements, adhere to federal and state privacy laws (e.g., FERPA), and require oversight by human professionals when determining specific interventions.

Operations: Vendor and Tool Evaluation

Source: pages 6–7

Prior to use, all AI applications must undergo a rigorous assessment for alignment with District policies on data security, privacy, and ethical use through the District Digital Learning Tool process.

Approved vendors must demonstrate compliance with the District's privacy and data handling standards, including a commitment to not using District data to train external models unless explicitly permitted.

If Generative AI tools have not been evaluated or have been rejected from use, they may not be used and may be blocked from the District network to prevent unauthorized data transfer and restrict access to materials of potential harm.

Regardless of AI integration, all software must be approved prior to use within the District.
